

Netflix Content Analysis: SQL-Driven Data Insights

Author: Purva (Student Data Analyst)

Date: April 2026

Dataset: Netflix Titles (8,807 records)

Analysis Method: SQL Queries & Python Data Processing

Executive Summary

This comprehensive analysis examines Netflix's content library through SQL-based data exploration and statistical analysis. The dataset encompasses 8,807 titles spanning movies, TV shows, and various genres from 2012 to 2021. Key findings reveal that Netflix's content strategy heavily favors movies (69.6% of catalog), with the United States dominating content production (41.9% of all titles). The analysis identifies critical trends in content distribution, geographic representation, and content quality metrics that inform strategic insights about Netflix's platform evolution.

1. Dataset Overview

The Netflix dataset contains comprehensive metadata about streaming content, including production details, ratings, genres, and descriptions. The dataset structure encompasses the following dimensions:

Dimension	Count	Details
Total Titles	8,807	Complete catalog snapshot
Movies	6,131	69.6% of content
TV Shows	2,676	30.4% of content
Countries	150+	Global production origins
Genres	40+	Diverse content categories
Rating Categories	13	From G to TV-MA
Time Period	2012-2021	Decade of content

The dataset was processed using PostgreSQL to extract meaningful patterns and relationships within Netflix's content ecosystem. All analysis queries are documented in the accompanying SQL file for reproducibility and transparency.

2. Content Type Distribution

Netflix's content portfolio demonstrates a clear strategic emphasis on theatrical releases over episodic content. The platform maintains a 2.3:1 ratio of movies to TV shows, reflecting Netflix's dual positioning as both a film streaming service and original series producer.

2.1 Movies vs. TV Shows

Movies: 6,131 titles (69.6%)

TV Shows: 2,676 titles (30.4%)

This distribution suggests Netflix's core business model prioritizes acquiring and producing feature films while maintaining a robust original series program. The movie-heavy approach aligns with Netflix's strategy to maximize content variety and appeal to diverse audience segments seeking both episodic storytelling and complete cinematic experiences.

2.2 Content Rating Analysis

The most common rating across both content types is **TV-MA**, indicating Netflix's focus on mature audiences and premium content. This rating dominance reflects the platform's strategy to differentiate from family-oriented competitors through sophisticated, adult-oriented programming.

Content Type	Most Common Rating	Percentage
Movies	TV-MA	35.2%
TV Shows	TV-MA	42.1%

The prevalence of TV-MA content demonstrates Netflix's commitment to producing premium, sophisticated entertainment that appeals to adult demographics with disposable income for premium subscriptions.

3. Geographic Content Distribution

Netflix's content acquisition strategy reveals significant geographic concentration, with North American and South Asian markets dominating the catalog. This distribution reflects both production capacity disparities and Netflix's strategic focus on English-language content.

3.1 Top Content-Producing Countries

Rank	Country	Content Count	Percentage
1	United States	3,690	41.9%
2	India	1,046	11.9%
3	United Kingdom	806	9.2%
4	Canada	445	5.1%
5	France	393	4.5%

The United States dominates Netflix's catalog with nearly 42% of all content, reflecting both Hollywood's production capacity and Netflix's American origins. India's strong second-place position (11.9%) demonstrates Netflix's significant investment in Bollywood and regional Indian cinema, representing a strategic expansion into high-growth markets. The combined top-5 countries account for 72.6% of Netflix's entire catalog, indicating substantial geographic concentration in content sourcing.

3.2 Strategic Implications

The geographic distribution reveals Netflix's dual-market strategy: leveraging established Hollywood production infrastructure while simultaneously investing in emerging markets like India. This approach enables Netflix to serve both English-speaking audiences globally and regional audiences in high-growth markets with culturally relevant content.

4. Genre Analysis

Netflix's genre portfolio reflects a balanced approach to content diversity, with International Movies and Dramas forming the foundation of the platform's identity. The genre distribution demonstrates Netflix's commitment to both mainstream entertainment and niche content categories.

4.1 Top 10 Genres by Content Count

Rank	Genre	Count	Percentage
1	International Movies	2,752	31.3%
2	Dramas	2,427	27.6%
3	Comedies	1,674	19.0%
4	International TV Shows	1,351	15.3%
5	Documentaries	869	9.9%
6	Action & Adventure	859	9.8%
7	TV Dramas	763	8.7%
8	Independent Movies	756	8.6%
9	Children & Family	641	7.3%
10	Romantic Movies	616	7.0%

Key Observations:

The dominance of International Movies (31.3%) and Dramas (27.6%) indicates Netflix's strategy to position itself as a global entertainment platform with diverse storytelling traditions. The combined share of these two genres (58.9%) demonstrates their centrality to Netflix's content identity. The strong presence of Independent Movies (8.6%) reflects Netflix's commitment to supporting diverse filmmakers and non-mainstream content, differentiating the platform from traditional broadcast networks.

5. Content Release Timeline

Netflix's content acquisition strategy shows clear temporal patterns, with peak acquisition occurring between 2018 and 2020. This period represents Netflix's aggressive expansion phase before market saturation and increased competition.

5.1 Content by Release Year

Year	Count	Trend
2021	592	Declining

2020	953	Peak
2019	1,030	High
2018	1,147	Peak
2017	1,032	High
2016	902	Moderate
2015	560	Building
2014	352	Growth
2013	288	Early
2012	237	Foundation

The data reveals that Netflix acquired content most aggressively between 2018-2020, with 2018 representing the peak year (1,147 titles). The decline in 2021 reflects either reduced acquisition rates or dataset capture timing rather than actual business contraction.

5.2 Content Addition Timeline

Netflix's content addition patterns show accelerating growth through 2019, peaking at 1,999 titles added in that year, followed by stabilization in 2020-2021. This trajectory reflects Netflix's transition from aggressive growth to sustainable content management.

Year Added	Count	Cumulative
2021	1,498	1,498
2020	1,878	3,376
2019	1,999	5,375
2018	1,625	7,000
2017	1,164	8,164

6. Content Quality Assessment

Netflix's content library demonstrates strong quality metrics, with 96.1% of titles classified as "Good" content (lacking violence/kill keywords in descriptions). This quality ratio indicates Netflix's editorial standards and content curation practices.

6.1 Content Categorization

Category	Count	Percentage
Good	8,465	96.1%
Bad	342	3.9%

The "Bad" category (342 titles) represents content with violence or kill-related keywords in descriptions, primarily comprising action movies, thrillers, and crime dramas. The high "Good" ratio (96.1%) reflects Netflix's commitment to maintaining a family-friendly platform while offering mature content through rating systems.

7. TV Show Analysis

Netflix's TV show portfolio includes 2,676 titles with varying season counts. The analysis of shows with 5+ seasons reveals Netflix's investment in long-form storytelling and franchise development.

7.1 Long-Running Series

TV Shows with 5+ Seasons: 99 titles (3.7% of TV shows)

These 99 series represent Netflix's most successful and enduring franchises, suggesting strong audience engagement and revenue generation. The relatively small percentage (3.7%) indicates that most Netflix shows either conclude within 4 seasons or are limited series, reflecting the platform's strategy of creating complete narrative arcs rather than indefinite episodic content.

7.2 Notable Long-Running Series

The longest-running shows in Netflix's catalog span 9+ seasons, including international productions and original series that have become cultural phenomena. These franchises demonstrate Netflix's ability to develop sustained audience engagement across multiple seasons.

8. Cast and Talent Analysis

Netflix's talent roster reveals significant concentration among prolific actors, with Indian cinema dominating the appearance metrics. The top 10 actors have accumulated 315 combined appearances across Netflix titles.

8.1 Most Prolific Actors

Rank	Actor	Appearances	Nationality
1	Anupam Kher	43	Indian
2	Shah Rukh Khan	35	Indian
3	Julie Tejwani	33	Indian
4	Naseeruddin Shah	32	Indian
5	Takahiro Sakurai	32	Japanese
6	Rupa Bhimani	31	Indian
7	Akshay Kumar	30	Indian
8	Om Puri	30	Indian
9	Yuki Kaji	29	Japanese
10	Amitabh Bachchan	28	Indian

Key Insights:

Seven of the top 10 most prolific actors are Indian, reflecting Netflix's substantial investment in Hindi cinema and Indian entertainment. This concentration demonstrates Netflix's strategic focus on the Indian market as a key growth driver. The presence of Japanese voice actors (Takahiro Sakurai, Yuki Kaji) in the top rankings reflects Netflix's investment in anime and Japanese animation, a rapidly growing content category.

9. Notable Content Highlights

9.1 Longest Movie

Title: Black Mirror: Bandersnatch

Duration: 312 minutes (5 hours 12 minutes)

This interactive film represents Netflix's experimentation with non-linear storytelling and viewer agency, standing as the longest single title in the Netflix catalog. The exceptional length reflects the film's innovative format combining cinematic production with interactive decision-making.

9.2 Content Diversity

Netflix's catalog encompasses 40+ distinct genres, with multiple content categories often overlapping within single titles. This genre diversity enables sophisticated recommendation algorithms and audience segmentation strategies.

10. Strategic Insights and Conclusions

10.1 Market Positioning

Netflix's content strategy reflects a sophisticated, data-driven approach to global entertainment distribution:

1. **Geographic Diversification:** While maintaining Hollywood dominance, Netflix actively invests in regional content, particularly in India, UK, and Canada, enabling localized market penetration.
2. **Content Type Balance:** The 2.3:1 movie-to-TV ratio balances acquisition economics (movies require lower ongoing production costs) with original series production (higher engagement and subscriber retention).
3. **Quality Curation:** The 96.1% "Good" content ratio demonstrates Netflix's editorial standards while maintaining mature content for adult audiences through rating systems.
4. **Talent Concentration:** The dominance of Indian actors in appearance metrics reflects Netflix's strategic focus on Bollywood and regional Indian cinema as growth markets.
5. **Temporal Acquisition:** Peak acquisition during 2018-2020 indicates Netflix's aggressive expansion phase, with subsequent stabilization reflecting market maturation and increased competition.

10.2 Future Directions

Based on this analysis, Netflix's strategic priorities likely include:

- **Continued regional content investment** to penetrate high-growth markets while maintaining English-language content dominance
- **Original series expansion** to increase subscriber retention and reduce licensing costs

- **Interactive content experimentation** building on successes like Bandersnatch
- **Quality-over-quantity approach** reflecting market saturation and increased competition from streaming alternatives

10.3 Conclusion

Netflix's content library represents a carefully curated global entertainment portfolio balancing commercial viability with artistic diversity. The SQL-based analysis reveals sophisticated data-driven decision-making across geographic sourcing, genre selection, and talent acquisition. As streaming markets mature and competition intensifies, Netflix's continued investment in regional content and original production will likely determine competitive positioning in emerging markets while maintaining dominance in established English-speaking regions.

Appendix: SQL Queries Reference

All analysis queries are documented in the accompanying `Netflix_Data_analysis.sql` file. Key query categories include:

- **Content Type Analysis:** Movies vs. TV Shows distribution
 - **Geographic Analysis:** Country-based content sourcing
 - **Genre Analysis:** Content categorization and distribution
 - **Talent Analysis:** Actor appearance frequency
 - **Quality Assessment:** Content categorization based on description keywords
 - **Temporal Analysis:** Release year and addition date patterns
